Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 25 March 2004.
2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Franchitto (5,724,946).

Franchitto discloses a fuel injection device comprising a fuel distribution pipe and a fuel injection valve mounted on said fuel distribution pipe (10), wherein a band-shaped protrusion (12) extends in the radial direction from a flange portion of a connecting pipe member arranged on said fuel distribution pipe and further extends in parallel to the axis of said fuel injection valve (14, 214), said band-shaped protrusion is provided with a fitting hole (218), and said fuel injection valve is provided with a protrusion (232) that fits into said fitting hole (218), see figures 1-7.

With regard to claim 2, said band-shaped protrusion is provided with a protrusion protruding inward (22), and said fuel injection valve is provided with a hollow (32) into which said protrusion fitted, see figure 1.

With regard to claim 3, said fuel injection valve is provided with a snap spring (232) that is fitted into said fitting hole and extends in the axial direction of said fuel injection valve, see figures 7. It is anticipated that the diagonally oriented locking groove (318) cause the locking pin 232 to snap, thereby acting as a snap spring.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 4-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Franchitto (5,724,946).

Franchitto discloses all the limitations as applied to claims 1-3 except for further optional changes in the shape of the band-shaped protrusion (12).

At the time the invention was made; it would have been an obvious matter of design choice to a person of ordinary skill in the art to provide the band-shaped protrusion (12) with a narrow portion, or a thin-walled portion because applicant has not disclosed that doing so provides an advantage, is used for a particular purpose, or solves a stated problem. One of ordinary skill in the art, further, would have expected applicant's invention to perform equally well with the fuel rail and injector assembly as disclosed by Franchitto because it snap fastens together the fuel injector and the fuel rail injector cup, see abstract.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited references show fuel rail and injector assembly.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of

Art Unit: 3747

the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
